❖ **How we are sure if we can make a positive change in 2 visits?**

- ❖ We classify pain into 3 categories. Mechanical. Mechano-chemical. And chemical.
- ❖ Mechanical pain most likely to respond to physical therapy. A common example is back pain-certain movements would increase the pain and certain movements would decrease it.
- ❖ Mechano chemical- A common example is tennis elbow. A combination of anti inflammatory drugs and physical Therapy would work great in this case.
- ❖ Chemical Pain- A common example is any sinister pathologies. Our P.T would not be able to reproduce the pain and therefore would be sent back to the primary care for further testing.

❖ We are sure to help your patients in 1 visit itself, but we added 1 more visit to be certain!

- ❖ Rest assured your patients are in good hands by our caring and knowledgeable therapists who are able to tell if they can help or not in relatively short period of time.

If you want to be associated with a true musculoskeletal expert refer your clients to us immediately.

Our care package is only \$800 for 20 visits which makes it only \$40 per visit. Making it very affordable for any one without insurance, high co-pays or with insurance limitations on number of visits.

“It's not just a business; we actually care about patient's well being.”
